Invenergy

States Edge Wind Energy Center

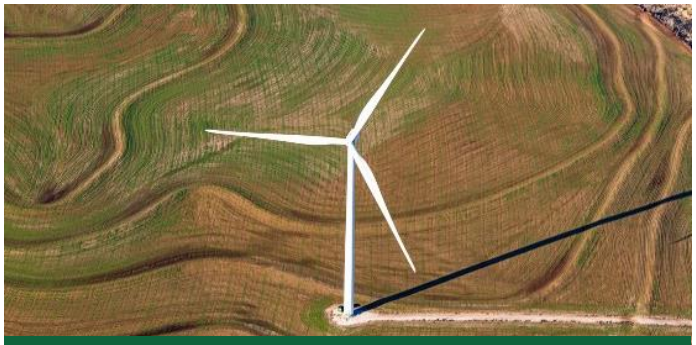
The States Edge Wind Energy Center is a proposed 2+ gigawatt (GW) wind power generation facility in Cimarron and Texas Counties, Oklahoma. Wind energy is clean, renewable power from one of the oldest known energy sources, and today is one of the most affordable ways to modernize America's energy grid.

Invested in Your Community

Clean energy projects live at the intersection of community interest, environmental stewardship, and innovative business practices. Invenergy designs projects that provide direct benefits to their host communities through new economic growth opportunities and additional funding to local organizations and nonprofits that are vital to the community's health and safety.

"The project has been good for us to work with beginning to end. We appreciate the loyalty to the community, to the schools, and to the county and the efforts they put in to make this project successful and that it will last in our community for a very long time."

Mark Noland
Community member & former school board member
Santa Rita East Wind, Irion County, TX



Project Highlights

- More than **$4 billion** of capital investment in Northwest Oklahoma
- **2 GW** is enough electricity to power more than **850,000 American homes**
- Up to **500 jobs** supported during construction
- Up to **30 full-time** operations and maintenance staff
- Emissions reductions equivalent to **1 billion trees planted**
- Supports local education, emergency & veteran services and environmental stewardship
- Commits to developing projects while minimizing impacts to sensitive ecological resources and ensuring responsible land use

Invenergy's Miami Wind Energy Center, located in Gray, Hemphill, and Roberts Counties, Texas.

A Proven Track Record in Sustainable Energy Development

Invenergy is a leading, privately-held developer and operator of sustainable energy solutions.

A U.S.-based company, Invenergy invests $537 million annually in the home communities where its projects are located.

Invenergy has successfully developed more than 200 projects, including wind, solar, transmission infrastructure, green hydrogen, natural gas power generation and advanced energy storage projects.
